

Outing Otter

DYLAN NGUYEN • SARIM SIDDIQUI • ALEXANDRA DURATE •
ALLIYAH MANUEL • JEET PATEL

Figma

DID YOU KNOW A GROUP OF OTTERS IS CALLED A PUDDLE?

WHAT SOCIAL MEDIA DO YOU UTILIZE?

ARE YOU AN INTROVERT?

CONCEPT

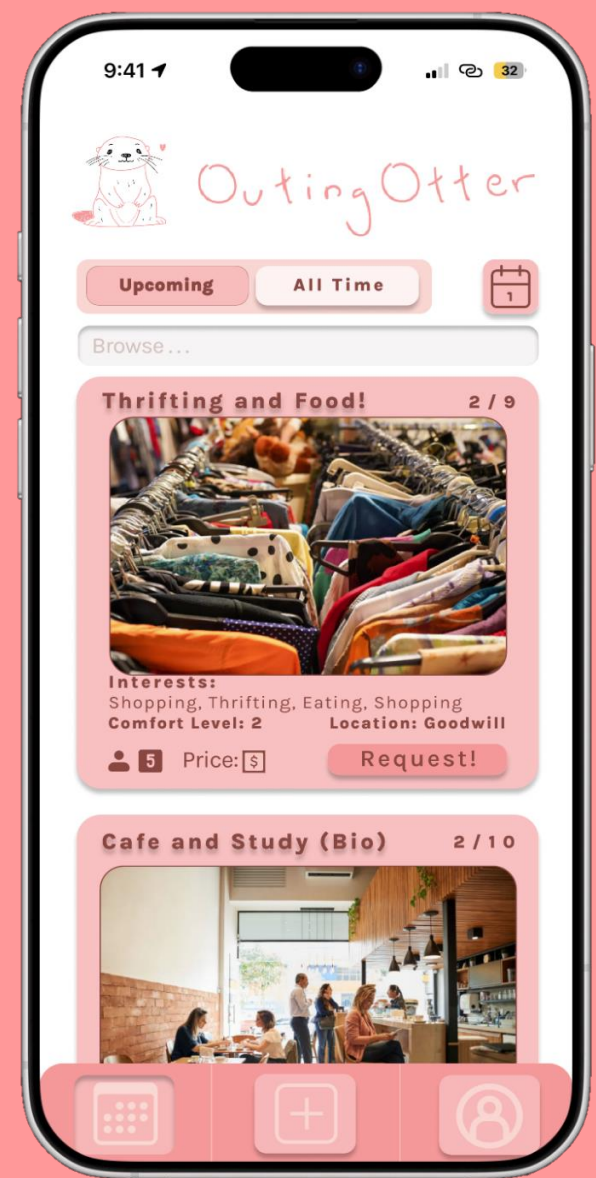

- Demographic: **Introverts** and **Anti-Social People**
- Social Media Inspiration
 - Instagram and LinkedIn event posting
- **Comfort level + Anonymity**
- **Not** a messaging app
- **Non-competitive**
- Programs: Swift & Figma
- **Innovation** of CampusGroups
- Theme: **Otters**

GOALS

- Connect
- Build community
- Encourage introverts to **break the ice**
- Provide a **safe space** for events

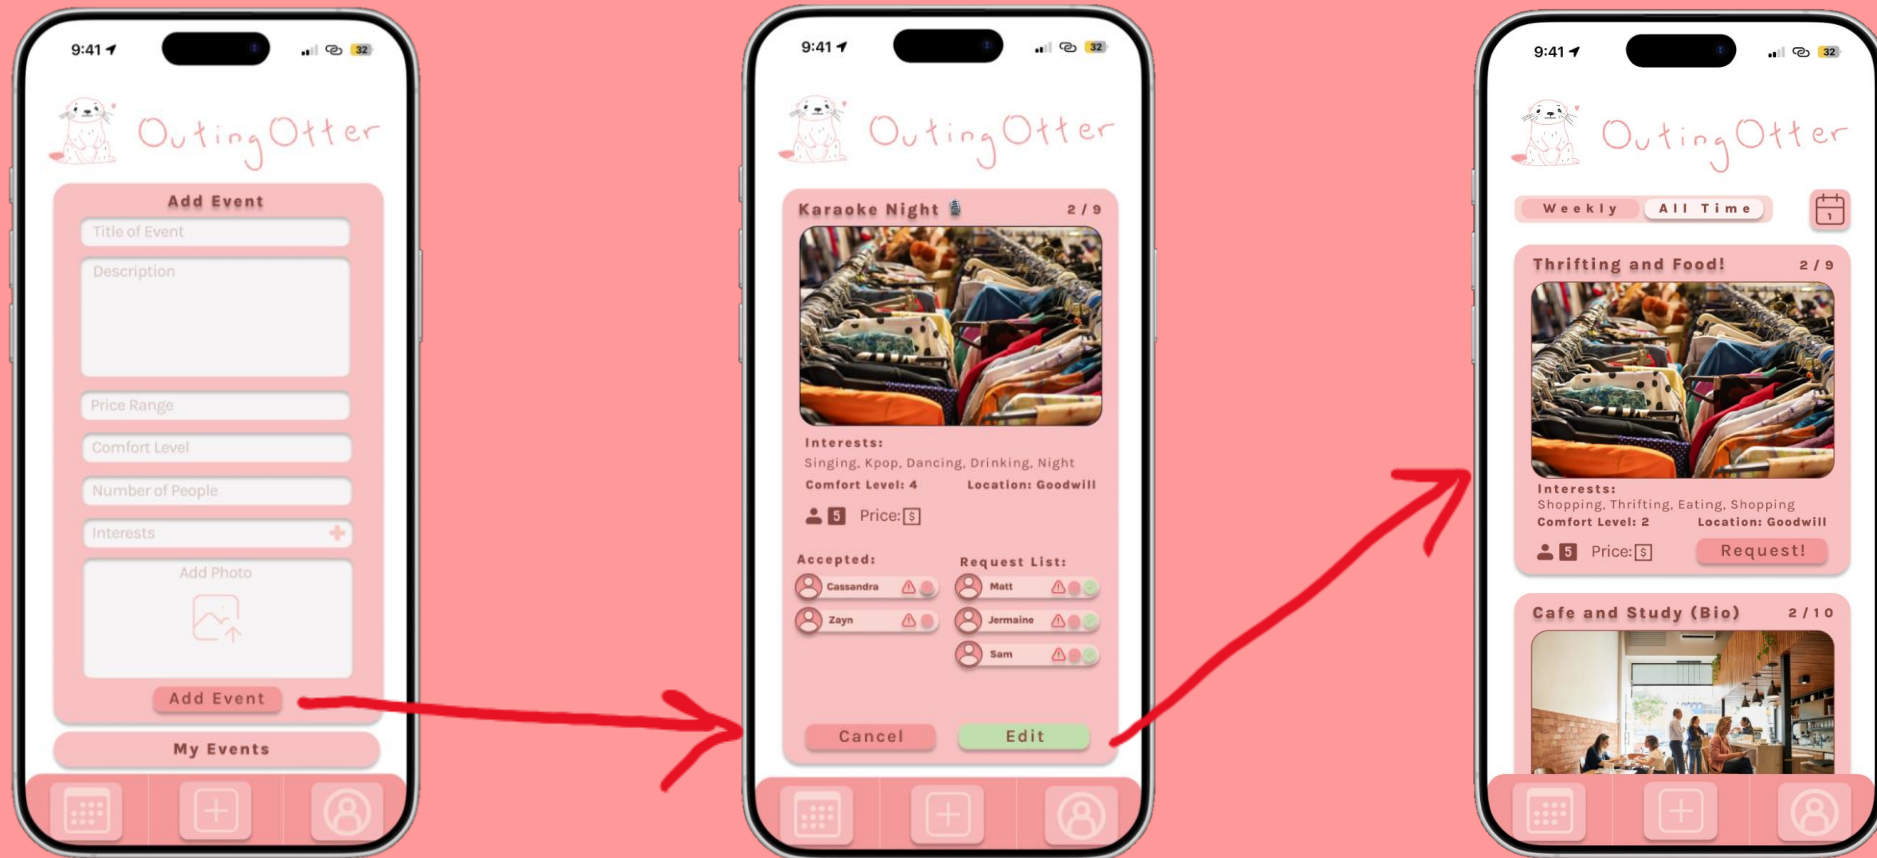

FEATURES

1. **Event** Posts
2. Unlockable Adding/Removing Friends Feature
3. **Comfort** Level and **Active** Status
4. **Limited Access** Control + **Anonymity**
5. **Extra** features
 - Games
 - Pointers
 - Stickers

MAKING POSTS

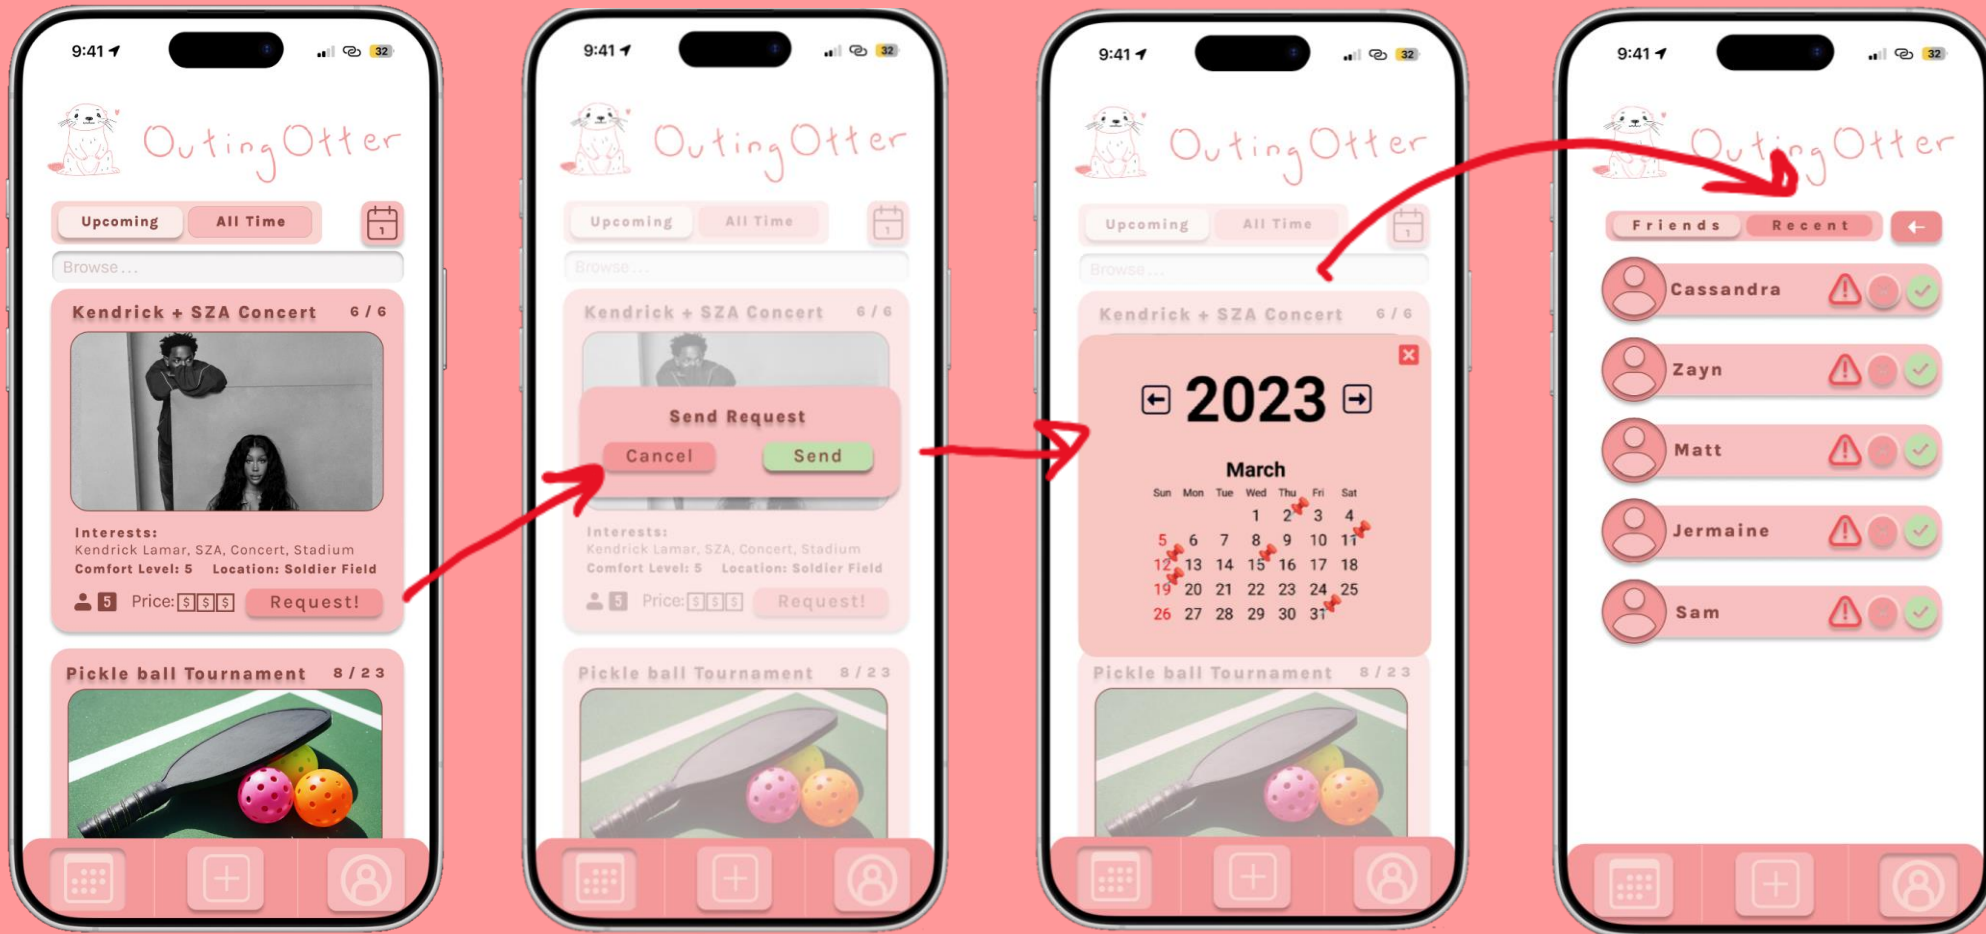

MAKING POSTS (CONT.)

51                     ImagePicker(imageData: $selectedImageData)
```

ATTENDING EVENTS AND ADDING FRIENDS

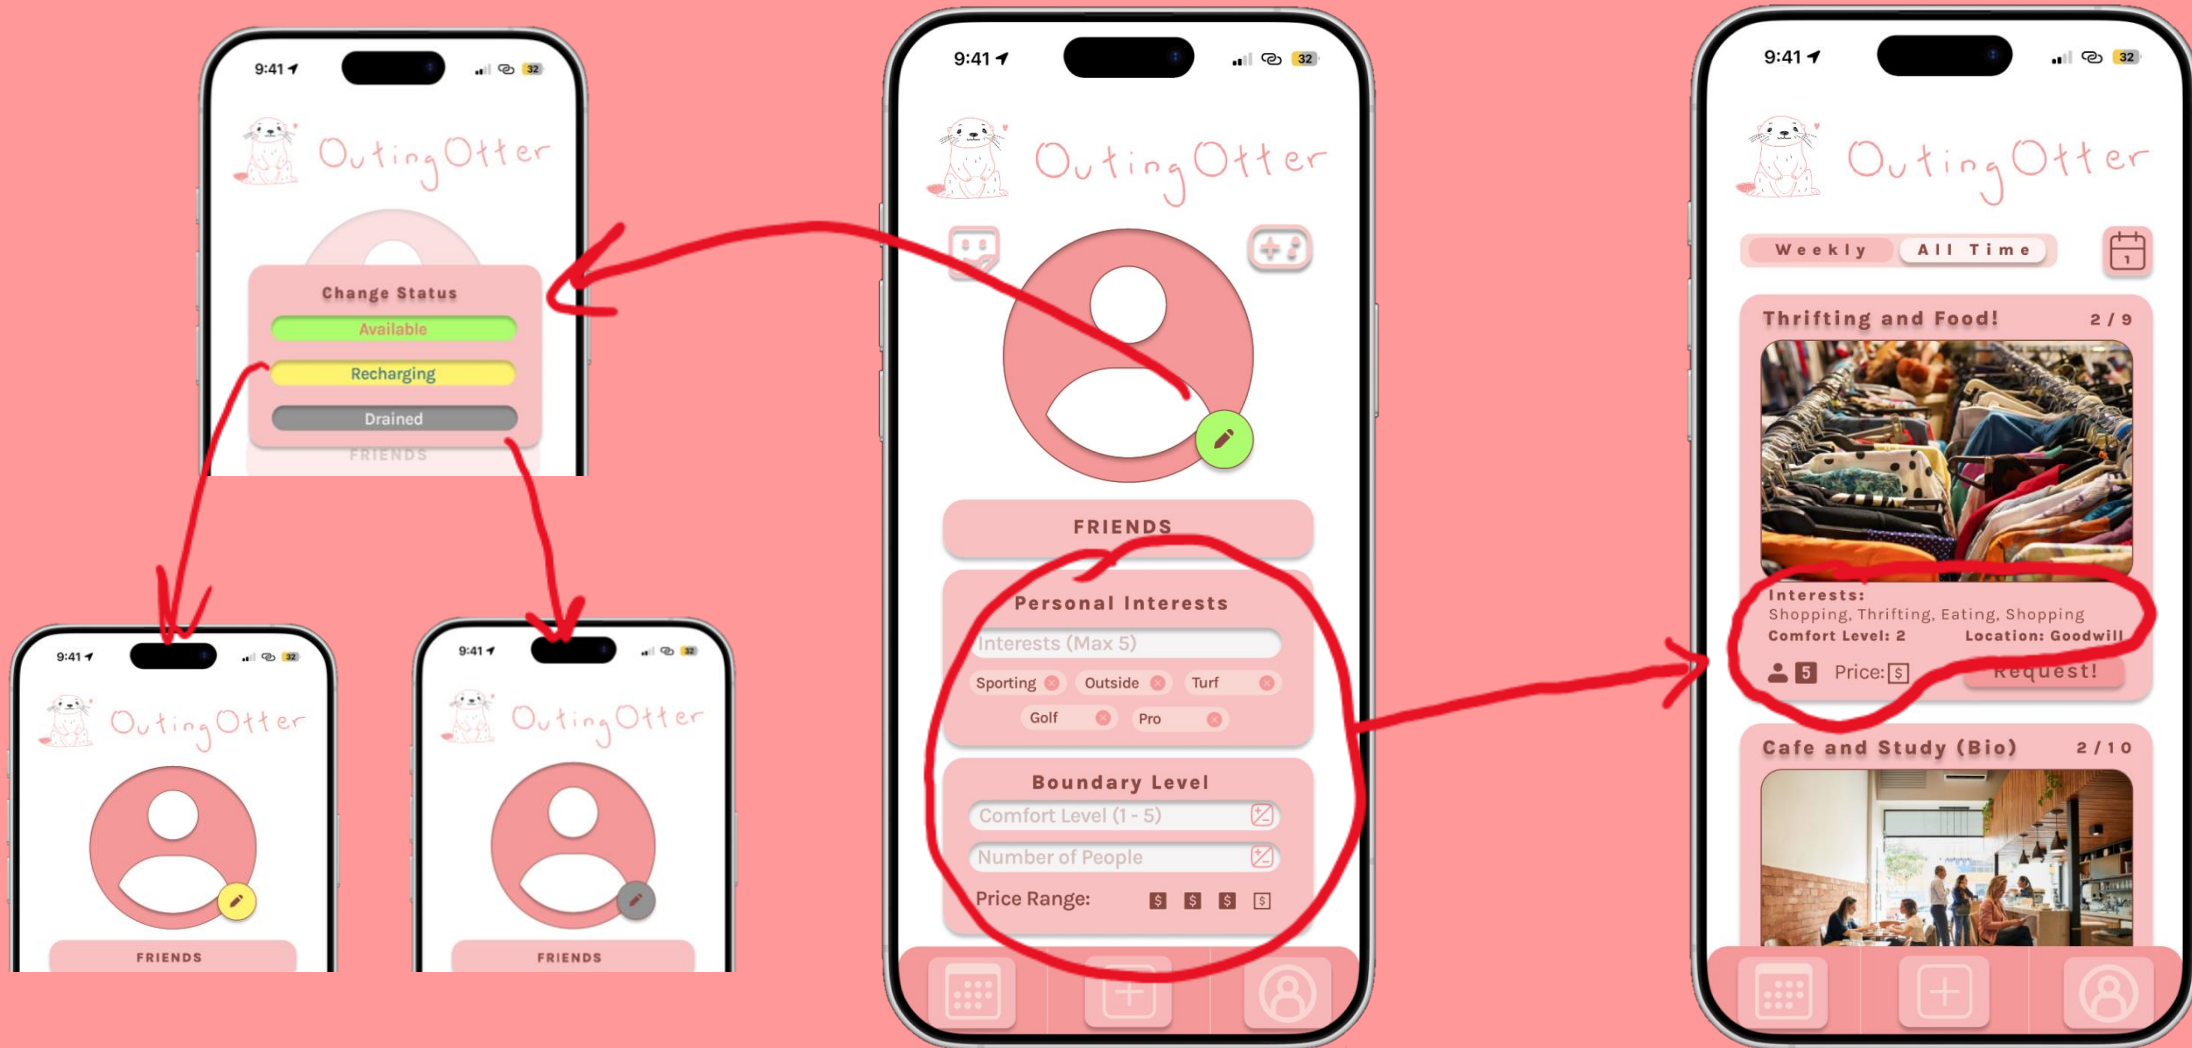

ADDING FRIENDS

```
7 import SwiftUI
8
9 struct Friend: Identifiable {
10     let id = UUID()
11     let name: String
12 }
13
14 struct FriendsPage: View {
15     @State private var friends: [Friend] = [
16         Friend(name: "Spark D dragon"),
17         Friend(name: "Dylan"),
18         Friend(name: "Sator Gojo"),
19     ]
20
21     @State private var newFriendName = ""
22
23     var body: some View {
24         NavigationView {
25             VStack {
26                 List {
27                     ForEach(friends) { friend in
28                         Text(friend.name)
29                             .font(.headline)
30                             .padding(.vertical, 8)
31                     }
32                     .onDelete(perform: deleteFriend)
33                 }
34
35                 VStack(spacing: 10) {
36                     TextField("Friend Name", text: $newFriendName)
37                         .textFieldStyle(RoundedBorderTextFieldStyle())
38                         .padding(.horizontal)
39
40                     Button(action: addFriend) {
41                         Text("Add Friend")
42                             .foregroundColor(.white)
43                             .padding()
44                             .frame(maxWidth: .infinity)
45                             .background(Color.blue)
46                             .cornerRadius(10)
47                     }
48                     .padding(.horizontal)
49                 }

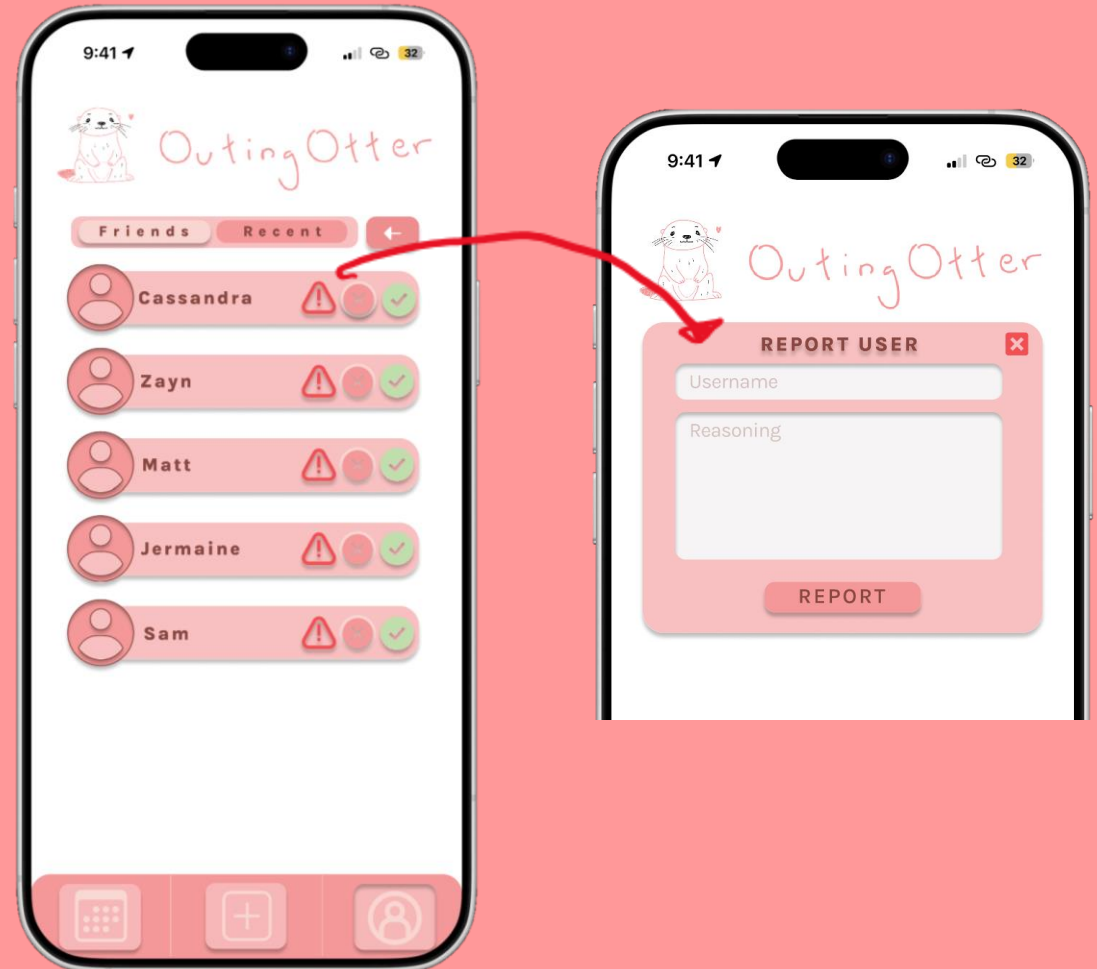

```

COMFORT LEVEL + ACTIVE STATUS

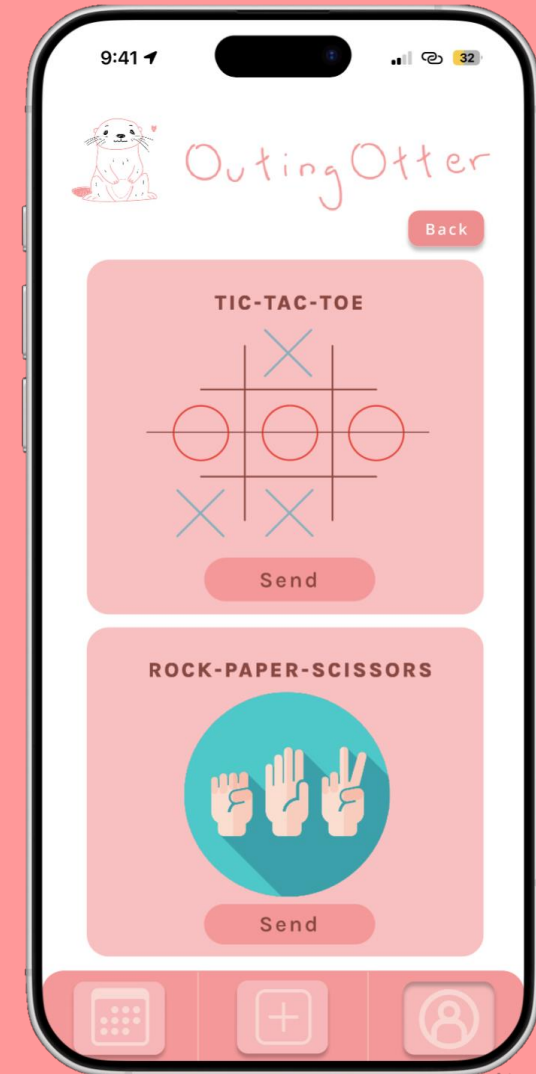

SAFETY ISSUES

- People are unpredictable
- Report button sets boundaries
- Limit shared information
 - Avoid harassment, no messaging

SUB-FEATURES

- Games
- Tic Tac Toe
- Rock Paper Scissors
- Mental Break / Recharge

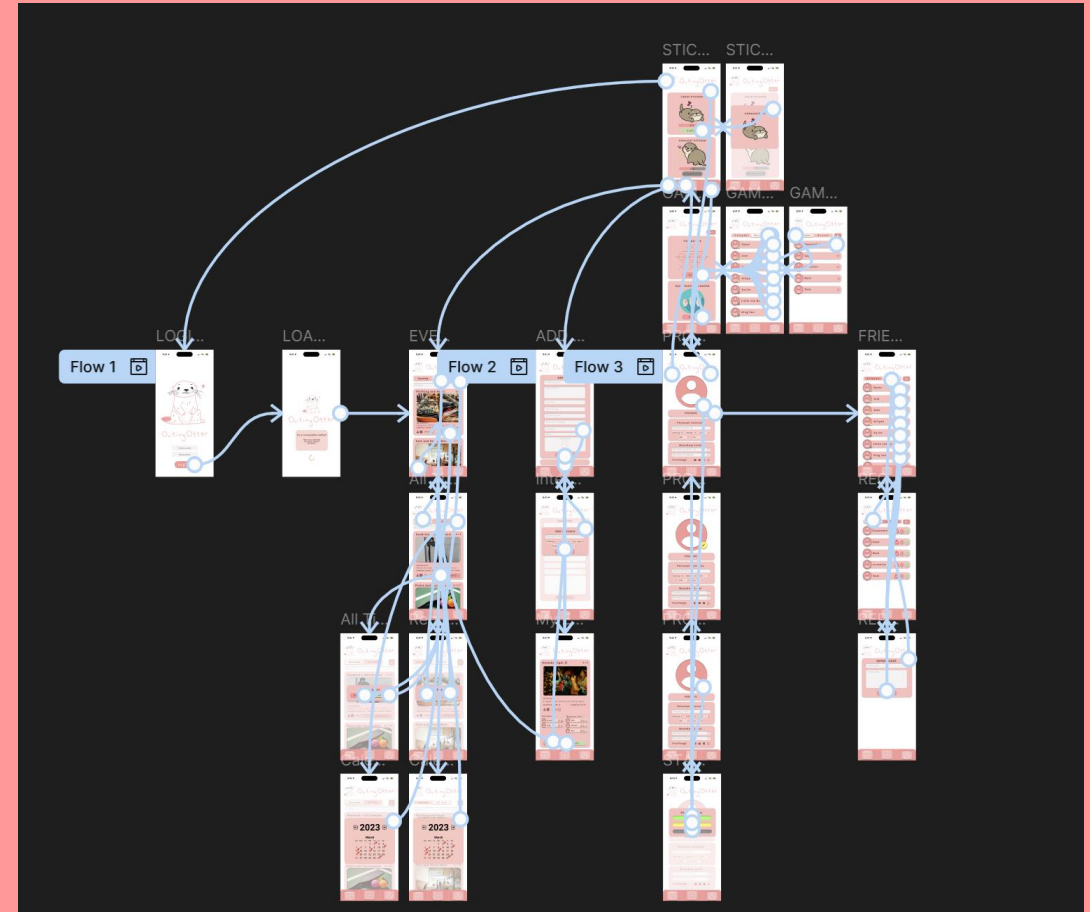

SUB-FEATURES

- Pointers/Conversation Starters
- Ex: "Should we check out a new cafe?", "Are you up for a coffee later?"
- Stickers
- The more missions accomplished the more unlocked

FIGMA FRONT-END + BACK-END

FUTURE IMPLEMENTATION

- Setback: **Limited Hardware**
 - May cause errors
- Stickers for **Motivation**
 - Design has been implemented
- **Weekly Logins**
 - To motivate users
- Multiplayer Game Potential
 - Playing with **new friends**

"SWIFT AS AN OTTER"

ARE YOU READY TO JOIN THE PUDDLE?

TRY IT OUT ;)

PROTOTYPE

BEHIND THE SCENES

```

Main's pseudocode (WIP) - dylan

Create user info

import os

path = r'C:\Users\learim\Downloads\userinfo.txt' # specify the correct file path

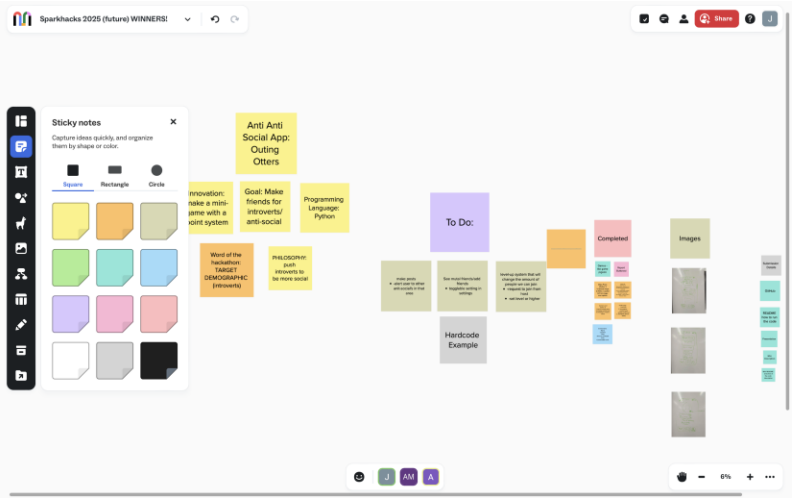

name = ""
comfortLevel = -1

if os.path.isfile(path):
    with open(path, 'r') as file:
        for line in file:
            name = line.split()[0] # Assuming name is the first word in the line
            comfortLevel = line.split()[1] if len(line.split()) > 1 else "" # Assuming comfort level is the second word in the line

    print("Name: " + name) # Checker
    print("Comfort Level: " + comfortLevel) # Checker
else:
    print("What is your name?")
    name = input()
    print("How comfortable are you?")
    comfortLevel = input()

file_path = "userinfo.txt"
with open(file_path, 'w') as file:
    file.write(name)
    file.write("\n")
    file.write(comfortLevel)

print("File " + file_path + " created successfully.") # Check for errors
```

WHAT WE LEARNED

- Teamwork/Collaboration
- Strength Allocation
- Time management
- Pseudocode
- Swift/Figma
- Bring a white board!
